

A network graph visualization showing a complex, branching structure. The nodes are colored blue, green, orange, and white, and are connected by gray lines. The graph has a central hub-and-spoke pattern with many smaller branches extending outwards. The blue nodes are the most numerous and form the main structure. A few green nodes are scattered in the middle. An orange node is located on a branch towards the bottom left. White nodes are also present, some of which are connected to the central hub. The overall shape is irregular and spread out.

Range: 0.02 to 0.98 pctl
