

A complex phylogenetic tree with a central cluster of blue and cyan nodes, surrounded by various other colored branches (yellow, orange, red, green, grey) extending outwards. The tree is rooted at the top left and branches outwards in multiple directions. The central cluster is the most dense, with many nodes of varying sizes. The branches are color-coded, likely representing different taxonomic groups or evolutionary lineages. The overall structure is highly branched and complex, typical of a large-scale phylogenetic analysis.
